

We all care about cancer

Please help us fight it

Cancers in the prostate, kidney, bladder, and testis represent nearly 20 per cent of all cancers diagnosed in the UK. Tragically, each year, about 18,000 people die from urological cancers.

Treating people effectively for urological cancers continues to be a major challenge. Scientists, doctors and nurses in Oxford are working to improve the way these cancers are diagnosed and treated. By supporting UCARE, you would be helping to fund this vital research.

UCARE raises money to:

-  Support cancer research.
-  Fund the development of new treatments.
-  Provide equipment and improve research facilities.
-  Help people understand urological cancers.
